Dr. Matthew Lilley

http://mattlilley.com/ | enquiries@mattlilley.com

Highly accomplished plasma physicist with extensive experience working in a collaborative research environment on non-linear phenomenon, instabilities and dynamical systems. Experienced in analytical and numerical problem solving techniques (within MatLab and Fortran). Passionate about pursuing fusion as a sustainable energy source for the future.

Education and Training:

October 2005 - August 2009
Imperial College London, PhD in Plasma Physics

October 2001 – June 2005
University of Warwick, MPhys 1st Class (89%, top of class) in Mathematics and Physics

Research Experience:

Imperial College London, UK

Junior Research Fellow
September 2011 - August 2014
Research focus - Fusion energy: nonlinear modelling of plasma instabilities, electrostatic confinement and particle dynamics in systems with discrete symmetry.

Achievements:

- Published 7 peer reviewed articles in world leading journals in collaboration with national and international laboratories, including an Editor's Highlight Physical Review Letter [8-14]
- Discovered a new class of high frequency instability on the MAST tokamak [14]
- Invited to lecture at York University [F] and UCL [G] and to present invited talks at national [H] and international [I,J] conferences.
- Fostered collaboration with industrial partner, Tokamak Energy, securing a gift of a £1M experimental device
- Constructed and costed a research proposal worth £1.6M involving negotiations with multiple stakeholders
- Coordinated experiments with senior scientists at CCFE and the International Tokamak Physics Activity panel to gather data to foresee and assess risks to ITER

Responsibilities:

- Manage a personal research budget of £25,000 and a student research budget of £12,000
- Supervise research of a PhD student, 2 Masters students and 1 third year student
- Manage and execute personal research programme
- Train postgraduates: lectures in advanced mathematical methods

Chalmers University of Technology, Sweden

Research Associate
September 2009 - August 2011
Research focus - Fusion energy: nonlinear modelling of plasma instabilities

Achievements:

- Successfully built open source MatLab software now used by several laboratories (https://github.com/mklilley/BOT)
- Worked with Integrated Modelling Group Leader at the ITER Organisation to incorporate my theory into modelling tools
- Published peer reviewed articles in world leading journals [6,7]
- Invited to give a summer school lecture [C] and present invited talks at two international conferences [D,E]
- Received a highly competitive Junior Research Fellowship position at Imperial College

Responsibilities:

- Manage and execute personal research programme
- Mentoring and informal supervision of a PhD student
- Training masters students: lectures in electromagnetic waves

Imperial College London, UK
PhD student
September 2005 - August 2009
Research focus - Fusion energy: Compressional Alfvén eigenmodes in spherical tokamaks

Achievements:

- Published several peer reviewed articles on both theoretical and experimental topics in collaboration with national and international laboratories, including a Physical Review Letter [1-5].
- Presented prize winning poster and oral presentations [A] at national and international conferences. Was invited to lecture at the Culham theory meeting [B].
- Organised the 2008 Institute of Physics conference on plasma physics.
- Engaged with MP to promote the importance of fusion to the public.

Responsibilities:

- Manage and execute personal research programme
- Running problem solving classworks for undergraduates
- Mentoring a student with learning difficulties

Other Professional Experience:

Retail Insight, UK
Senior Analyst - Decision Science
July 2015 – Present

- Created an algorithm in python to optimise price reductions and times in order to minimise supermarket waste
- Provided informal training for employees to introduce mathematical rigour into their data analysis techniques
- Helped to create a research framework for the company
- Presented to clients in a data science and sales role

Level 8 Ltd, UK
Founder
November 2013 – Present

- Founded a development company with 2 fellow physicists to create a communication app
- Designed and implemented a flexible and responsive front end user interface using self taught knowledge of HTML, CSS and Javascript

Self employed, UK
Freelance Physicist & Tutor
September 2014 - June 2015

- Taught maths and physics to students with a variety of abilities
- Designed and created a brand http://mattlilley.com/ for my services and for others (http://rchapmanharris.com/)
- Published a peer reviewed article with international collaborators [15]
