

# Dr. Matthew Lilley

<http://mattlilley.com/> | [info@mattlilley.com](mailto:info@mattlilley.com)

---

Highly accomplished plasma physicist with extensive experience working in a collaborative research environment on non-linear phenomenon, instabilities and dynamical systems. Experienced in analytical and numerical problem solving techniques. Passionate about pursuing fusion as a sustainable energy source for the future.

## **Education and Training:**

October 2005 - August 2009  
Imperial College London, PhD in Plasma Physics

October 2001 – June 2005  
University of Warwick, MPhys 1<sup>st</sup> Class (89%, top of class) in Mathematics and Physics

## **Research Experience:**

### **Imperial College London, UK**

Junior Research Fellow

September 2011 - August 2014

Research focus - Fusion energy: nonlinear modelling of plasma instabilities, electrostatic confinement and particle dynamics in systems with discrete symmetry.

#### Achievements:

- Published 7 peer reviewed articles in world leading journals in collaboration with national and international laboratories, including an Editor's Highlight Physical Review Letter [8-14]
- Discovered a new class of high frequency instability on the MAST tokamak [14]
- Invited to lecture at York University [F] and UCL [G] and to present invited talks at national [H] and international [I,J] conferences.
- Fostered collaboration with industrial partner, Tokamak Energy, securing a gift of a £1M experimental device
- Constructed and costed a research proposal worth £1.6M involving negotiations with multiple stakeholders
- Coordinated experiments with senior scientists at CCFE and the International Tokamak Physics Activity panel to gather data to foresee and assess risks to ITER

#### Responsibilities:

- Manage a personal research budget of £25,000 and a student research budget of £12,000
- Supervise research of a PhD student, 2 Masters students and 1 third year student
- Manage and execute personal research programme
- Train postgraduates: lectures in advanced mathematical methods

### **Chalmers University of Technology, Sweden**

Research Associate

September 2009 - August 2011

Research focus - Fusion energy: nonlinear modelling of plasma instabilities

#### Achievements:

- Successfully built open source MatLab software now used by several laboratories (<https://github.com/mklilley/BOT>)
- Worked with Integrated Modelling Group Leader at the ITER Organisation to incorporate my theory into modelling tools
- Published peer reviewed articles in world leading journals [6,7]
- Invited to give a summer school lecture [C] and present invited talks at two international conferences [D,E]
- Received a highly competitive Junior Research Fellowship position at Imperial College

#### Responsibilities:

- Manage and execute personal research programme
- Mentoring and informal supervision of a PhD student
- Training masters students: lectures in electromagnetic waves

### **Imperial College London, UK**

PhD student

September 2005 - August 2009

Research focus - Fusion energy: Compressional Alfvén eigenmodes in spherical tokamaks

#### Achievements:

- Published several peer reviewed articles on both theoretical and experimental topics in collaboration with national and international laboratories, including a Physical Review Letter [1-5].
- Presented prize winning poster and oral presentations [A] at national and international conferences. Was invited to lecture at the Culham theory meeting [B].
- Organised the 2008 Institute of Physics conference on plasma physics.
- Engaged with MP to promote the importance of fusion to the public.

#### Responsibilities:

- Manage and execute personal research programme
- Running problem solving classworks for undergraduates
- Mentoring a student with learning difficulties

### **Other Professional Experience:**

#### **Decoded, UK**

Product Developer

August 2017 – September 2018

- Creating new, and enhancing existing, educational experiences in the area of technology, e.g. blockchain, machine learning, data, code and quantum computing
- Create hands on tools to help bring tech concepts to life
- Delivering the courses to non technical audiences

#### **Retail Insight, UK**

Senior Analyst - Decision Science

July 2015 – December 2015

- Created an algorithm in python to optimise price reductions and times in order to minimise supermarket waste
- Provided informal training for employees to introduce mathematical rigour into their data analysis techniques
- Helped to create a research framework for the company
- Presented results to clients

#### **Level 8 Ltd, UK**

Founder

November 2013 – Present

- Founded a company with 2 fellow physicists in order to fund our fusion energy ideas
- Created a hybrid app called Squidler (<https://squidler.com>) using Ionic, ActionHeroJS, Redis and MongoDB

#### **Self employed, UK**

Freelance Physicist, Tutor & Developer

September 2014 - August 2017

- Published a peer reviewed article with international collaborators [15]
- Taught maths and physics to students with a variety of abilities
- Designed and created a brand <http://mattliley.com/> for my services and for others (<http://rchapmanharris.com/>)
- Became Chief Technology Officer for [The Curtain Works](#). Added new and extended existing features to flesh out the initial site design and took the site live
